

Olight i1 EOS Keychain Flashlight

Olight i1 EOS Flashlights are incredibly small but surprisingly powerful. These little O-Light flashlights manage to cram a whopping *180 lumens* into two and a half inches of flashlight. That's barely larger than the *CR123A rechargeable battery* that powers it. Built for transportation, the **i1 EOS flashlight** has a long battery life to match, with up to 72 hours of run time on the 4 lumen Low setting. Speaking of power settings, the **O-Light i1 EOS Pocket Flash Light** has three of them - Low, Medium, and High - that you can switch between by loosening and tightening the flashlight's bezel. Olight has improved the i1's design with the addition of a removable pocket clip and a keychain attachment, both of which make carrying this mini flashlight easier than ever. The type III hard anodized aluminum (or flawless stainless steel, depending on the model you choose) of the mini flashlight's body makes it tough, while the *IPX-8 waterproofing* is sure to come in handy the next time you're caught in a downpour or drop your flashlight in a lake. For a diminutive LED flashlight that brings full-size illumination wherever you go, slip the **O Light i-1 EOS Mini Flashlight** in your pocket.

i1 EOS - i2 EOS - i3S EOS

The Olight i1, i2, i3S series flashlights come in miniature sizes as the best elaboration for the EDC flashlight. Each flashlight is equipped with its respective single CR123A, AA, or AAA battery. With three output levels of Low-Med-High, a removable clip, and its keychain hole, the i Series is convenient every day and everywhere. These flashlights are suitable for small area lighting: dark stairs, corridor lighting, a miniature light handy for close up tasks.
